

This datasheet is for the

IC695CPE400

<http://qualitrol.com/p-16587-ic695cpe400.aspx>

The IC695CPE400 for the Rx3i has 64 Mbytes of RAM. The IC695CPE400 for the Rx3i 20
Watts max of input power.

PACSystems* RX3i CPE400

Outcome optimizing control

Designed for Real-world Demands

GE's PACSystems Rx3i is a flexible and high performance control system that is widely used in a diverse range of applications including water/wastewater metro, industrial steam, automotive, chemical, oil and gas, discrete manufacturing and modular machine designs. These diverse applications require a compact controller that can deliver the high performance and flexibility needed to run application specific control reliably.

The PACSystems Rx3i CPE400, part of GE's Industrial Internet Control System, is the industry's first outcome optimizing controller. It augments real-time deterministic control with embedded Field Agent technology, delivering near-real time advice through market analysis, fleet and enterprise data, or asset/process knowledge to optimize the outcomes that today's businesses require. The Predix™ enabled CPE400 provides reliable, secure communication and analytics using either cloud-based or edge-based outcome optimizing apps. Controls can now be programmed to dynamically influence business outcomes, generate new forms of revenue, and improve profitability.

Reliable, High-Speed Performance

The PACSystems Rx3i CPE400 runs on a real time operating system for delivering, reliable, secure industrial applications. It offers premier high speed performance

and secure data handling for any multi-disciplined control system.

A large working memory accommodates large programs and extensive data storage. The quad core high-speed microprocessor executes programs faster than ever before. It supports industry-standard PROFINET with I/O update rates as fast as 8ms for 16 devices. With Ethernet interface rates up to 1Gbps, the CPE400 is built for rapid, reliable data interchange.

Industrial Internet Enabled

Outcome Optimizing controllers use real time hypervisor technology to run real time deterministic control applications concurrently with the embedded Field Agent* technology (EFA) without any adverse impact of one over the other. EFA technology is a platform for securely applying Predix applications and secure connectivity to the Predix Cloud as well as run edge apps. Running the Field Agent concurrently with the real-time control applications allows the CPE400 to rapidly leverage external data. External monitoring may be used to analyze and optimize entire business operations. The analysis can then be used to dynamically adjust real-time industrial controls to align with changing business objectives in today's Industrial Internet age.

Advanced Security

In today's Internet age, industrial controls are constant targets of cyber threats. We at GE understand the risk involved in securing

our customer's most important assets. We believe in defense in depth architecture to secure the asset from potential cyber threats.

The Rx3i CPE400 has been developed to be secure by design, incorporating technologies such as Trusted Platform Modules, secure, trusted, and measured boot. A centralized configuration allows encrypted firmware updates to be executed from a secure central location. A broad suite of cyber-security technology and tools help prevent unauthorized updates while built-in security protocols help protect against man-in-the-middle and denial of service attacks.

Key Benefits

Reduced risk. Built on the strong foundation of GE's 40 years' experience providing real-time, deterministic controls for the world's industrial assets. The controller is secure by design, enabling secure operations and connectivity from edge to cloud.

Reduced lifecycle cost. Advanced capabilities simplify system architecture and reduce applied engineering costs. Further costs are reduced with embedded PROFINET, allowing for dedicated I/O to be chosen for application specific needs.

Optimized Business Outcomes. Embedded Field Agent technology allows for secure connection to the Industrial Internet, leveraging data to analyze and optimize business operations.

Specifications

- Microprocessor Specification – 1.2 GHz AMD G Series Quad Core
- Operating System – VxWorks

Temperature Range

- -40°C to 70°C

Power Requirements

- Input Power (Max) – 20 Watts
- Input Voltage (Min) – 18 Vdc
- Input Voltage (Max) – 30 Vdc
- Memory Backup Mechanism – Energy Pack: IC695ACC403

Firmware Upgrade

- CPU Firmware Upgrade Mechanism – Web Interface/ Ethernet Port

Display

- OLED Display – Yes

Program Portability

- RX3i PACSystems Applications using Family Type Conversion

Program Security

- Secure Boot – Yes
- Trusted Platform Module (TPM) – Yes

Program Storage

- RAM – 64 Mbytes
- Non-Volatile Flash – 64 Mbytes
- Life Expectancy, Energy Pack Capacitors – 5 years

Auxiliary Storage

- Micro SD – Pending
- Remote Data Storage Device (RDSD) – USB - pending

Communications

- LAN1 – 10/100/1000 Mbps supported by unswitched RJ-45
- LAN2/LAN3 – 10/100/1000 Mbps supported by a pair of unswitched RJ-45 connectors
- EFA: 10/100/1000 Mbps supported by unswitched RJ-45
- Ethernet RJ-45 Switch – 2-Port Switch 10/100/1000 x2
- Embedded Field Agent Ethernet RJ-45 – 10/100/1000 x1
- USB – USB-A 3.0 x2 (functionality pending)

Protocols

- SRTP
- Modbus TCP
- Ethernet Global Data (EGD)
- PROFINET – Yes
- MRP – Yes
- OPC-UA Server¹ – Y15

EU

- CE Mark
- EMC Directive
 - IEC/EN 61131-2: 2007 (sections 8-10, Zone B)
 - IEC/EN 61000-6-2: 2005 Ed 2.0
